

Improvements for Shape Notes

The noteheads of the half-notes should have the same length of the half-note sol. That's not the case with the recent 2.7.30 version

As to the whole notes, they need to have the same length too. You could make them wider. Or, more preferably, you could make the "sol" smaller, in a way that would just be like the half-note, as some songbooks have it. Then for scores that wouldn't use shape notes, it would be the standard type of whose note.
