Title: By Book

1 Introduction

The purpose is to check internal links like a table of contents as well as external links like this one:
<http://www.google.com/>

This is a table:

Title	Link
Swftools-common Archives:	http://lists.gnu.org/archive/html/swftools-common/
Open-source flash	http://www.swftools.uni.cc/
Penguin Pete's Blog: Flash	http://www.penguinpetes.com/b2evo/index.php?cat=24
Technoargica Examples:	http://technoargia.free.fr/swftools/

Be aware:

- these are interesting links
- good links
- links to check

This image:

Illustration 1: just an image

may bring you to a book:

Illustration 2: an image linking to the internet

2 *My steps*

using windows-version:

- 1) Conversion to pdf (using openoffice itself)
- 2) Conversion to swf: `pdf2swf testdocodt.pdf -o testdocodt.swf`
- 3) Adding viewer: `swfcombine.exe -o testdocodtv.swf rfxview.swf viewport=testdocodt.swf`

Result:

nice but,

- 1) external links are not working
- 2) internal links work, but pages-numbers of the viewer is not following. For example: being on page one, click on Introduction: you see page too, but the viewer-info remains on 1. So clicking on the viewer forward/backward is misleading...

Alternative on the viewer: Freepaper (<http://lededansdubocal.net/spip.php?rubrique5>)

OK : external links are working

Not OK: external links

Not OK: configuration xml/buttons (I installed this in a subdirectory)

Condition: you need a webserver
