Of what you want in a controller

Think big but pay small!

The Productivity3000 programmable controller can get your big job done easier *and* cheaper. The \$599 CPU with 50Mb memory supports large programs, complete with tagname database and program documentation stored onboard. The huge (100,000+) I/O capacity gives you plenty of room to plan and expand. And the CPU's seven communication ports make integrating a large system easier than you can imagine. **Download the free programming software and check it out!**

- **USB local I/O expansion port** - supports up to four additional local I/O bases
- **Ethernet remote I/O expansion port** - supports 32 remote I/O racks and up to 64 GS series AC drives
- **High-speed Ethernet port for network of HMI** (up to 32 C-more panels), other controllers, and enterprise system communications
- **Two serial ports for peripheral device interface or simple controller networking**
- **USB port for data logging to removable drive, and project transfer**

30 Optimizing Maintenance Through Information

Combining digital networks, new modes of analysis, and visualization and management insight, maintenance and operations teams can get their assets back in the race in record time.

34 Tips for Good OEE

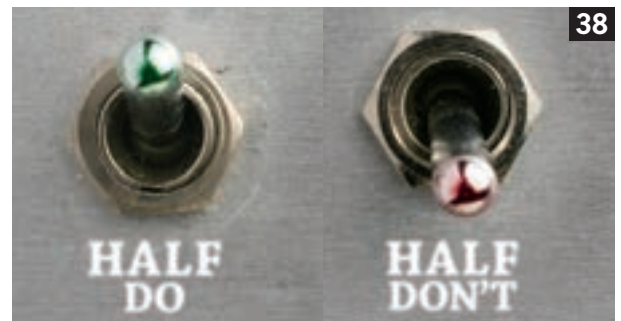

Users and vendors explain how they have been able to boost the efficiency of their equipment by controlling factors within their manufacturing operations that have a direct impact on cost.

38 Digital Diagnostics

Half of the respondents to a recent Automation World survey indicate that they do not use the advanced diagnostics available in their Hart and Foundation Fieldbus devices. The reasons: cost, complexity and training.

43 How Social Media is Improving Collaboration

Social media isn't just for personal use any more. Businesses of all kinds, particularly manufacturers, are looking to leverage social media types of connections for easier access to needed expertise, business intelligence insights and new product ideas.

On The Cover:

Databases need not be the repositories of ancient data awaiting an intrepid Indiana

Jones of maintenance to uncover the hidden treasure.
