

# 1 header

Style: article  $\Rightarrow$  first line of paragraph indented  
 ... if it follows another regular paragraph

- some itemized list

next line is not indented  
 and then, one is indented again.  
 and so is the next

big figure

**Figure 1.** big figures are never indented and always span the full column

the next line is indented ( $\Rightarrow$  question: why is the first paragraph after a itemized list not indented but the first paragraph after a big figure is indented?)

small figure

**Figure 2.** small figures are indented like the first line of a paragraph

- some itemized list

small figure

**Figure 3.** leading to a varying indentation depending on the preceding content...

small figure

**Figure 4.** and also leading to a shift to the right beyond the margin of the text if the figure caption is wide enough to be broken automatically...

( $\rightarrow$  question: why are small figures indented like paragraphs?)
