## Using universal-argument

The universal-argument command (Ctrl-U) does not work quite the same way as it does in Emacs. In TextWrangler, it is a simple repeat-count. For example, if you type Ctrl-U, then a 3, and then Ctrl-N, the insertion point will move down three lines. There is no visual feedback as you type the number, and no way to backspace or otherwise edit the number. If you make a mistake, the best you can do is type Ctrl-G (keyboard-quit) and start over.
