 ** The Emacs repository

 Emacs development uses Git on Savannah for its main
 repository.
-Briefly, the following shell commands build and run
-Emacs from scratch:
+To configure Git for Emacs development, you can run
+the following:

         git config --global user.name 'Your Name'
         git config --global user.email 'your.name@exa
```
