
Algorithm 1. Writing Texmacs Style Files

- 1: Do something
 - 2: **while** (this while was created after the <item> change)
(only inline content allowed here and no indentation, document tag seems to be missing)
 - 3: **end while** (indentation wrong)
 - 4: **if** (if was created after the change)
(only inline content allowed here and no indentation, document tag seems to be missing)
 - 5: **end if**
 - 6:
 - 6: **if** (← why is indentation wrong? if was created before the change, cannot move to same line as “6:”)
 - 7: Use <meta>+left/right to add cases
 - 8: (multiline content allowed here)
 - 9: **else if** some condition
 - 10: Equations work:
$$\varepsilon \rightarrow 0, \tag{1}$$
 - 11: **else**
 - 12: ← indentation still wrong
 - 13: **end if**
 - 14: Done.
-
