

```
> help
An external file editor for Texmacs.
[help] Shows this help,
[open] Open PATH/TO/FILE : opens the given file, set the environment variable
FEDIT_PATH, and switch in editing mode. If a file is currently opened, closes
it first.
[temporary] Like "open", but with a temporary file.
[>EOF] In editing mode, closes the file and switches in command mode.
[exec] "exec STRING" : calls a shell with STRING as parameter (it may contain
shell variables).
[setcompiler] "setcompiler STRING": sets a compiler command STRING that is
executed on EOF (it may contain shell variables).
[compile] Executes currently defined compiler command.

> setcompiler gcc -x c $FEDIT_PATH -o /tmp/toto
> temporary
You are now editing /tmp/tmpfileEXrsQ7.
#include <stdio.h>
int main()
{
    printf("Hello Texmacs World\n");
    return 0;
}
>EOF
[Command terminated normally]
> exec /tmp/toto
Hello Texmacs World
[Command terminated normally]
>
```
